

Cars are more risky

Letter To The Editor Published Saturday, May 24

I read with disgust that security guards at my alma mater, McGill University, are blocking cyclists from entering the downtown campus from the Milton gate. Vehicles that carry single occupants are much more dangerous and damaging to the environment.

Given oil prices, pollution, global climate change, highway congestion, suburban sprawl and the concomitant loss of biodiversity and the destruction of natural spaces and local agriculture, isn't it time for McGill to encourage transportation alternatives in all ways

North Americans use twice as much energy to power their flydrive transportation system as does the rest of the world. Except for shank's mare, bicycles are as carbon neutral as you can get.
